

eUnity Plugins

Linkproxy and Customlink

Release notes: 21 April 2020

Installation

This release requires both plugins to be uninstalled and reinstalled. Because customlink is dependent on linkproxy, customlink must be uninstalled first.

go to yourmoodle.org/admin/settings.php?section=editorsettingsatto
and

yourmoodle.org/admin/localplugins.php

This will remove any existing link data and so existing links will no longer redirect as previously.

Teacher permission

Editing teachers (shown as teacher in the Moodle interface) as well as managers now default to having permission to create new links.

Customlink Button

The code now includes a minified version of the javascript. There was a potential issue on live sites that were set with debug lower than developer.
