

eUnity Plugins

Linkproxy and Customlink

Release notes: 7 Feb 2020

Installation

This release requires the current version to be uninstalled first. This can be done by going to `admin/settings.php?section=editorsettingsatto`

You will receive a warning about loss of data, however the editor plugin does not store any data of its own so it can be safely uninstalled/reinstalled.

If this is not done you will receive a message about a higher version number being already Installed.

Remove Medical Record

This data for this field is embedded in the accession number and so was being ignored. The form field and processing has been removed.

Edit existing links.

Selecting an existing link will now bring up the editing dialog populated with current values that can be modified.

New Settings fields

The local Linkproxy has two new settings Clientid and Scope. These settings can be accessed by a user with an admin account through `yourmoodle/admin/settings.php?section=local_linkproxy`
