

eUnity Plugin release notes

22 Jan 2019

The system consists of two plugins, one Local (linkproxy) and one button plugin for the atto editor (customlink).

Atto Customlink

Copy the customlink code to moodle\lib\editor\atto\plugins

Copy the linkproxy code to moodle\loc\linkproxy.

Login as admin and go to the admin menu. Go through the standard plugin install procedure.

After installation go to

<http://yourmoodle.org/admin/settings.php?section=editorsettingsatto>

add a line in Toolbar config in the form

customlink = custom link

Check in an instance of Atto that you have a new button indicated by a + symbol for this plugin.

Confirm that the button icon is visible to teachers and not visible to students

Add a test link and confirm it performs the redirect and shows the image as expected.

Local Linkproxy

Note that because this is a local plugin and available site wide it is not connected to any Moodle course backup process. The plugin uses a single database table called Local_linkproxy (or mdl_local_linkproxy if using the default prefix of mdl)

The config page for linkproxy can be accessed from
yourmoodle/admin/settings.php?section=local_linkproxy

Settings

API URL
local_linkproxy | apiurl

https://eunity.api.rvc.ac.uk/viewer 

Default: https://eunity.api.rvc.ac.uk/viewer

API URL
